QUANTIFIND

Master Your Supply Chain Resilience with AI-powered Precise Risk Intelligence

Protect against potential disruptions, and maintain trust with customers and stakeholders.

Strategic Vendor Vetting: A Data-Driven Approach

The growing sophistication of financial crimes, compliance regulations, and the rising specter of geopolitical instabilities underscore the need for data-driven, efficient, and scalable vendor vetting. The traditional approach to vendor vetting is reactive and lacks the agility needed in today's fast-paced business environment. As consumers apply additional pressures and regulators require improved supply chain governance, businesses must have a clear view of the risks introduced by their suppliers.

Quantifind Offers a Cutting-Edge Solution.

Quantifind's precise risk Intelligence automation delivers state-of-the-art AI to parse through billions of structured and unstructured public and licensed data to provide a risk assessment with the highest degree of accuracy, speed, and scale. Quantifind analyzes over 90 comprehensive data sources, including global trade data, beneficial ownership, adverse media, sanctions list, and S&P news and insights. Analysts can configure the platform to only search through data for their jurisdiction. Risk management teams get results in milliseconds to quickly vet third-party vendors.

Benefits of Risk Intelligence

Risk Mitigation:

Early identification and mitigation of compliance risks. By leveraging Quantifind AI algorithms, supply chain companies can efficiently identify potential risks in their vendor network. Early detection allows for timely mitigation strategies, preventing disruptions and maintaining a semaless flow of operations in adherence to industry regulations.

Reputation Protection:

AI-driven risk intelligence enables supply chain companies to proactively identify and address potential risks associated with third-party vendors. By mitigating risks before they impact operations, companies safeguard their brand reputation, instilling trust among customers and stakeholders.

Customer Satisfaction:

AI-powered risk intelligence offers continuous monitoring, providing real-time alerts for potential disruptions in the supply chain. This ensures uninterrupted service delivery, meeting customer expectations and maintaining high levels of customer satisfaction, even in the face of unforeseen challenges.

Solutions That Make a Difference

Research & Discovery

Effectively assess potential supply chain vulnerabilities. Expose unknown connections from a knowledge graph of millions of individuals and organizations.
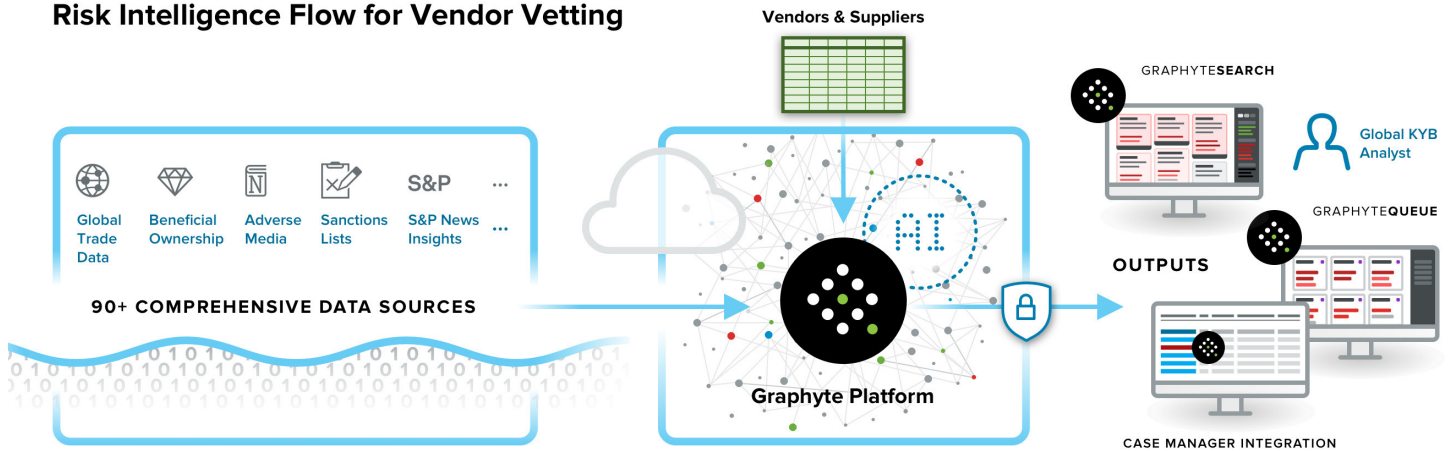

Risk Assessment & Dilligence

Quickly screen vendors and subcontractors. Get real-time risk intelligence to build a risk assessment that includes precise confidence scores and risk levels for a high degree of accuracy.

Continuous Monitoring & Alerts

Continuously monitor third-party vendors to get early warnings of emerging risks. Get risk alerts to instantly understand new data context for vendors of interest.

Risk Intelligence Flow for Vendor Vetting
