

Agentic Middleware

The Intelligence Layer Between Data and Decisions.

As organizations invest heavily in data, AI, and workflow automation, a new challenge is emerging: transforming fragmented information into trusted intelligence that drives accurate decisions. Building more agents isn't enough. Financial institutions need a way to consistently distill vast amounts of fragmented data into explainable signals that agents, analysts, and systems can trust.

Quantifind's Agentic Middleware is the Answer

Agentic Middleware is the intelligence layer between data and decisions. Built on Quantifind's Name Science™, entity resolution, network intelligence, AI-driven signal extraction, and award-winning risk typology library, it transforms fragmented information into trusted, explainable intelligence for agents, analysts, and workflows.

The result? Better decisions, stronger governance, improved agent performance, and a durable foundation for enterprise AI.

Customer Perspective

"Building workflow agents is relatively straightforward. Building trusted intelligence at scale is much harder. Quantifind gives us the intelligence foundation that makes our AI investments more effective."

— Chief Information Officer,
Global Financial Institution

Benefits of Agentic Middleware

Turn Data Into Decisions: Extract accurate, explainable signals from vast amounts of internal and external data and transform them into actionable intelligence.

Govern AI with Confidence: Support transparency, auditability, human oversight, and regulatory expectations across AI-powered operations.

Validated for Enterprise AI: Support model governance with comprehensive documentation, independent validation, and above-the-line and below-the-line testing designed for regulated environments.

Build for What's Next: Create a durable foundation that remains valuable regardless of which models, agents, or workflow tools emerge in the future.

Meet Institutions Where They Are: Integrate with existing data sources, technology stacks, workflow agents, and operational systems without requiring rip-and-replace modernization.

Surface Actionable Risk Signals: Leverage Quantifind's award-winning risk typology library and 60+ AI / ML models to identify, contextualize, and prioritize risk across financial crime, money laundering, fraud, cyber, corruption, sanctions, and financial health domains.

Scale Intelligence Across the Enterprise: Apply the same intelligence foundation across sanctions compliance, KYC, investigations, payments, third-party risk, and future AI initiatives.

Why Quantifind is Different

Most vendors build agents. Quantifind distills data into the trusted intelligence that powers them.

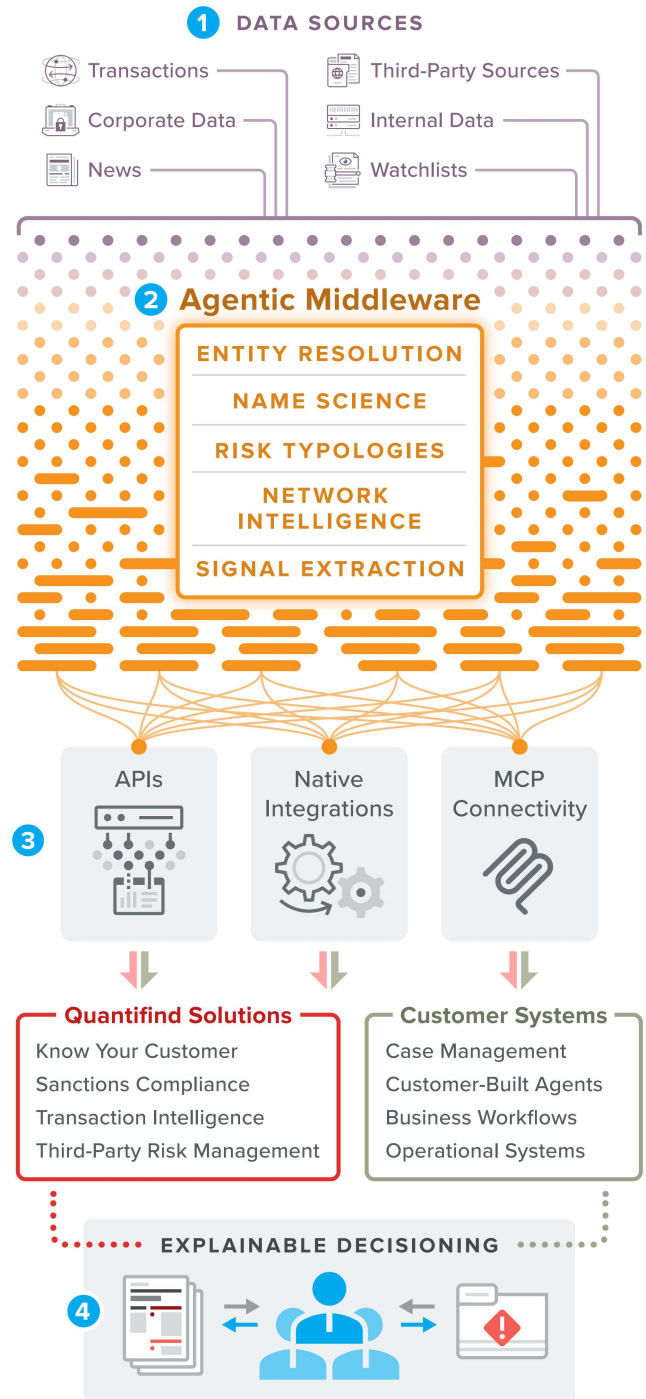

- Trusted signal extraction
- 60+ AI/ML risk typologies
- Explainable intelligence
- Name Science™ and entity resolution
- Network intelligence
- Governance by design
- Bring your own agents

How It Works

- 1 Data Integration:** Quantifind ingests and enriches internal and external data sources, creating a unified intelligence foundation across customers, counterparties, transactions, entities, and networks.
- 2 Agentic Middleware:** Name Science™, entity resolution, network intelligence, AI-driven signal extraction, and Quantifind's risk typology library distill vast amounts of fragmented information into trusted, explainable intelligence. More than 60 AI and machine learning models identify and contextualize risk signals across financial crime, money laundering, sanctions, fraud, cyber, corruption, and financial health domains.
- 3 Intelligence Delivery:** Quantifind delivers intelligence through APIs, MCP connectivity, and native integrations, making trusted signals available across Quantifind solutions, customer-built agents, case management platforms, and operational workflows.
- 4 Explainable Decisioning:** Every recommendation is supported by evidence, transparency, governance controls, and audit-ready documentation.

Optional Agentic Execution

Organizations can combine Agentic Middleware with Quantifind's Agentic Execution capabilities to automate enrichment, triage, escalation, and workflow actions while maintaining transparency, governance, and human oversight.

Quantifind is the proven leader in AI-driven risk intelligence, specializing in detecting and mitigating financial crime risks at scale. Serving top organizations across both public and private sectors, Quantifind delivers unmatched accuracy, speed, and scalability.
